Lcrm Saas

Lcrm Saas is the Software as a Service version of [Lcrm](#).

The SaaS version contains Organization subscriptions powered by [Stripe](#) and [Paypal](#).

Advantages of saas:

Rather than purchasing software to install, or additional hardware to support it, customers subscribe to a SaaS offering. Generally, they pay for this service on a monthly basis using Stripe and Paypal. Transitioning costs to a recurring operating expense allows many businesses to exercise better and more predictable budgeting. Users can also terminate SaaS offerings at any time to stop those recurring costs.

Prerequisite

You need to fulfil the following requirements before installing Lcrm Saas.

Server Requirements:

Lcrm Saas is based on [Laravel](#) framework. Laravel have a few [requirements](#) of its own. Make sure that your server satisfies these requirements.

Also make sure that you [configure](#) your web-server.

Note: Because of a Dependency you need to use **php 7.1** or above

Database details:

Before installing make sure you have created a database and have the necessary connection details.

You need to enter them during the installation process.

Activated Stripe Account :

Lcrm saas uses [stripe](#) to accept payments and implement subscriptions. In order to receive the payments you should have an [activated stripe account](#).

Stripe Webhook:

When using stripe if something happens on stripe's end, we will be informed through [webhooks](#).

Eg: Failing to charge the users card

In order to receive the events from stripe we need to setup a webhook in the [stripe dashboard](#).

For this project you need to set the webhook to pointing to `stripe/webhook` .

Eg: If your URL is `saas.com` then the webhook URL in the stripe should be `saas.com/stripe/webhook`

SMTP Details :

In order to send mails you need to enter the smtp details.

Make sure you have them, or else no mails will be sent and the users won't be notified of certain events from the app.

Installation

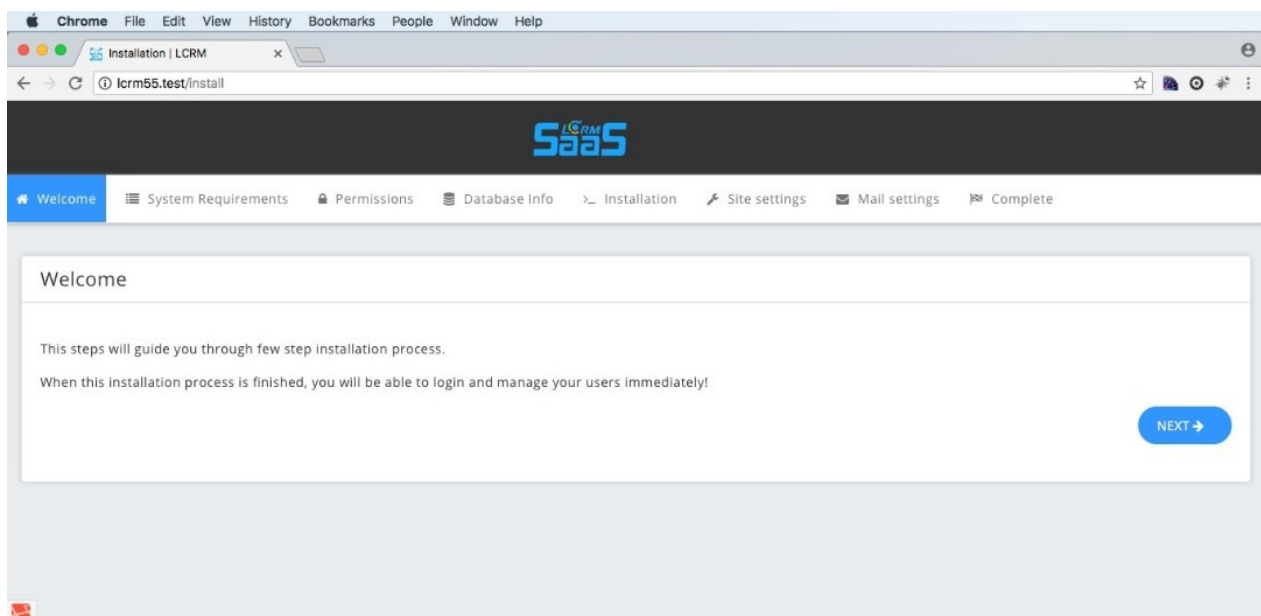

Installing the lcrmsaas can be done in two ways. They are

1. Web Installation
2. Manual Installation

1.Web Installation:

To begin Installation copy the files to your server.

- Open the URL in the browser.
- Then fill the mandatory fields during the installation (check all the tabs)

Note:

- If you are using localhost open the root as "localhost/lcrm_saas/public" then it automatically redirects to install page.
- If you are hosting from the root of the server or using a virtualhost, then open the root as "servername/public". If you want to get rid of "/public", please follow these tutorials.
<http://blog.netgloo.com/2016/01/29/deploy-laravel-application-on-shared-hosting/>

2. Manual Installation :

If you prefer to install and configure the product manually, you can follow the below steps.

- Edit the `.env` file to fill the appropriate details like app url, database details.
- Remove the `VerifyInstallation` middleware from `app/Http/Kernel.php` file.
- Remove the `require 'install.php';` line from `routes/web.php` file.

- Edit the `SettingsSeeder.php` and `ManualInstall.php` in the `database/seeds/` directory and fill appropriate details.
- Give the necessary permissions for the `storage` and `bootstrap/cache` directories.

```
chmod -R 775 storage
chmod -R 775 bootstrap/cache
chmod -R 775 public
chmod -R 775 .env
```

If you are on linux/ mac you can run below command to chown it.

```
chown -R www-data /var/www
```

- Run the following commands:
- `php artisan key:generate`
- `php artisan migrate --seed`
- `php artisan db:seed --class=ManualInstall`

compile assets

If you don't have good knowledge on nodejs and npm, you can copy public folder files from codecanyon's downloaded files

Make sure you have [nodejs](#) installed in your system with minimum version `6.14.1` , you can check installed version by running `node -v` command in terminal.

install local packages

```
yarn
```

move assets to public

```
npm run dev
```

Then open the site and check if everything is working by logging in using the details provided.

Note:

If you are familiar with Laravel consider setting a [queue](#) driver and run a [queue:work process](#) in order to make time taking tasks like sending a mail run separately and make the request faster.

Changing the Frontend Page content:

Frontend consists of

1. Home
2. About Us
3. Contact Us
4. Pricing
5. Privacy Policy
6. Signup
7. Login

Note: After editing any blade.php file be sure to run `php artisan view:clear`

1. Home page

To change the content, edit `resources/views/frontend/index.blade.php`

To change the header (nav bar) , edit `resources/views/frontend/_header_custom.blade.php`

2. About Us

To change the content, edit `resources/views/frontend/about_us.blade.php`

To change the header (nav bar) , edit `resources/views/frontend/_header_custom.blade.php`

3. Contact Us

To change the content, edit `resources/views/frontend/contactus.blade.php`

To change the header (nav bar) , edit `resources/views/frontend/_header_custom.blade.php`

4. Pricing

To change the content, edit `resources/views/frontend/pricing.blade.php`

To change the header (nav bar) , edit `resources/views/frontend/_header.blade.php`

5.Privacy Policy

To change the content, edit `resources/views/frontend/privacy.blade.php`

To change the header (nav bar) , edit `resources/views/frontend/_header.blade.php`

6. SignUp

To change the content, edit `resources/views/frontend/register.blade.php`

To change the header (nav bar) , edit `resources/views/frontend/_header.blade.php`

7. Login

To change the content, edit `resources/views/login.blade.php`

To change the header (nav bar) , edit `resources/views/frontend/_header.blade.php`

Admin Interface:

This section covers in detail about the different sections available for admin. You can find the each page explanation in left side bar.

Settings page

You can find this page in the Left Menu. Before proceeding with other pages first you need to fill all the mandatory fields in this page.

Steps to be followed:

- In the same page you can see EMAIL CONFIGURATIONS tab with input fields related to SMTP. Fill all the mandatory input fields with valid details then click on OK BUTTON.
- In the same page you can see STRIPE SETTINGS tab with "Pushable key" and "secret key" fields. You can get your keys from the stripe [Dashboard](#). Make sure that you enter the **live keys** instead of the test keys. If you enter test keys, then you won't be paid for the user subscriptions.
- In the same page you can see PAYPAL SETTINGS tab with "Sandbox" and "live" credentials. For testing purpose choose SANDBOX option with valid sandbox credentials or if you want to use it as live, choose LIVE option, by using valid live credentials.
- Enter valid details then click on OK BUTTON.

That's it now you can create [Plans](#).

PayPlans:

In this page you can create a plan based on your specifications.

This app uses [Stripe](#). You can check details about Stripe plans [here](#).

- **No. of people field:** if you use 0 (zero) then you can create unlimited staff accounts or if you use any numerical value like 2 then you can create two staff account for your organization.
- **Trial field:** This field is used to assign the no. of trial days for the plan.
- **Card type:** This is to know whether your plan is of "With Card" or "Without Card". If you choose "With Card" then it will ask you the card details while choosing this plan or if you choose "Without Card" then it won't ask you to enter the card details.
- **Plan visibility:** This is to enable the plan to be seen by normal user. If the plan is visible, All users can see it, and subscribe to it. If a plan is not visible, Only Admin users can see it. You can create special plans for specific purpose and assign only specific organizations to it or You can hide old plans which you don't want new user to access anymore.

Note:

You can create other values for "Currency" and "Interval" fields in OPTIONS page.

When updating any plan you cannot edit few of the parameters.

you can read it [here](#).

Organizations:

The Organizations are the ones who use the service.

An organization can be created in two ways:

- 1) By registering through the registration page(signup)
- 2) Create the account through organizations page of admin section.

Note:

Creation of organizations from the admin section is intended to be used for payments you receive from other sources or if the user don't want to use subscriptions.

So you have to select a plan and mention the number of days the user will stay in the plan.

The Organizations consists of an admin user and his staff. The organizations can create companies and customers to interact.

Subscriptions:

Subscriptions allow you to charge an Organization on a recurring basis.

So the organization will be charged at the end of the specified period for the plan they choose.

You can create subscriptions by using **Stripe** and **Paypal**

You can change the subscription plan for any organisation, or cancel the subscription entirely.

Subscriptions by Stripe:

Once you cancelled the subscription, it is not terminated immediately. The subscription ends after the current period that the user have already paid for.

Subscriptions by Paypal:

Paypal allows you create subscriptions. You can Cancel, Suspend, Reactivate and Update the subscriptions. Once you cancel the subscription, it is terminated immediately and you need to create the new Subscription.

You can manage subscriptions by using paypal. To know more about manage subscriptions in paypal refer the bellow link.

https://developer.paypal.com/docs/classic/paypal-payments-standard/integration-guide/manage_subscriptions/

Admin has permission to Suspend, Reactivate and Cancel Subscriptions.

Organisation has permission to Create, Change, Suspend, Reactivate and Cancel Subscriptions.

If the organisation is suspended then he cannot access all the pages until the plan is reactivated or changing to another plan.

To know the working of recurring payments of paypal refer the bellow link.

<https://developer.paypal.com/docs/classic/express-checkout/integration-guide/ECRecurringPayments/>

Contacts:

This page is used to see and manage all the contact messages you received from the contact us page which is in frontend.

Contact us

Payments:

In this page you can only see the Organizations which are created by ADMIN.

Payments are useful in situations where the user is unable to pay with card or if they don't want recurring payments.

Here you can change the plan or the duration of the organization's usage period for the organizations created manually by Admin.

- If admin changes the plan then the organization can continue to use the service without any interruption.
- If organization or user changes the plan using subscription page then you won't see them in this page any more and their account will be moved to SUBSCRIPTIONS (stripe or paypal).
- Here admin can see all the plans (including NO VISIBILITY PLANS)

Options:

Here we can manage all the options which are in the application

Ex: Dropdown value etc

For adding a new option first you need to choose a **category** then assign the **title & value** of the field.

Support:

Here admin can interact with the users and able to respond to the tickets which are raised.

Open Ticket:

It consists of tickets or issues which are raised by the users.

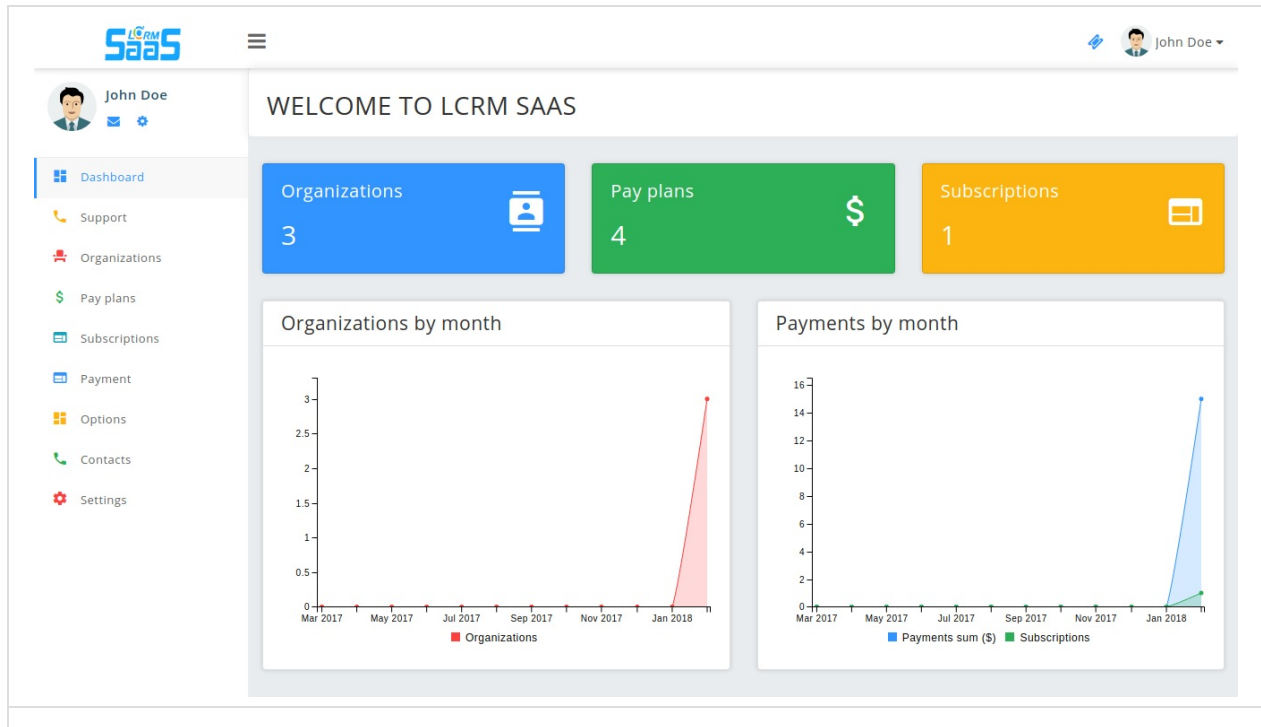

Closed Tickets:

It consists of tickets which are closed or solved.

Dashboard:

In this page you can see the data in Graphical Representation

- You can see the Payment Sum by monthly wise
- You can also see the no. of organisation, subscriptions created in particular month.

User Interface:

This section covers in detail about the different sections available for User.

You need to follow the step by step process.

Step1 (Settings):

You can find **Settings** page in the Left Menu. Before proceeding with other pages first you need to fill all the mandatory fields in this page.

Step2 (Staff):

You can find **Staff** page in the Left Menu. In this page you can invite a staff member for your organisation.

Note: You can invite the staff members based on the plan you choose.

example:

- If your plan has a 10 member access, then it will allow you to invite 10 members including the User(**YOU**) (9 staff and 1user).
- If your plan has a 0 (zero) member access, then you can invite unlimited members to your organisation.

Step3 (Leads):

You can manage possible leads for your business.

Step4 (Products):

Here you can create the products but before creating the product you need to create the **Category**.

Step5 (Sales Teams):

Can create the Teams and assign/manage the team members to the particular team

Step6(Customers):

Before creating the customer you need to create a **company**.

Company: You can create/edit the company details.

Customer (contact persons): While creating the customer we need to assign him a company so that customer will belongs to the particular company.

Step7 (Opportunities):

Here we can create Calls and Meetings along with the Opportunities.

- If you choose the opportunity as **Won** then it converts to **Quotations** (You can see it in Converted list).
- If you choose opportunity as **lost** then you need to give a reason (You can see it in Archived list)
- If you delete the opportunity then you can find it in Deleted List.

Step8 (Quotations):

Here we can add the **products** to the quotation by clicking on add product or else you can choose a **Quotation Template**

Quotation template: This consists of multiple products. You can add or remove the products as well.

Draft Quotation: This consist of all the **Converted Opportunities** and Quotations with **Draft status**

Sent Quotation: If you choose the sent Quotation, then the quotation will be visible in the **customer Section**, If the customer **accepts** the Quote then you can convert it to **Sales Order/Invoice**.

Step9 (Sales Order):

We can manage the sales order by creating and editing. It mainly consists of **Converted Quotations** which can be seen in **Draft Sales Order**.

You can also convert the Sales Order to Invoice for final billing.

Step 10(Invoice):

Here we can see the Status for Open Invoice, Paid Invoice and Over Due Invoice.

Step11 (Payments):

It consists of two type

- Customer can pay the invoice directly using Stripe by clicking the **show** invoice option.
- Can also pay by User, Which can be done in **Payment logs**.

Calendar:

The meetings which you create will be visible here as shown in the below image. You can even edit the meeting and change the privacy settings as per your need.

CALENDAR

< > today

February 2018

month week day

Mon	Tue	Wed	Thu	Fri	Sat	Sun
29	30	31	1	2	3	4
5	6	7	8	9	10	11
12	13	14	15	16	17	18
19	20	21	22	23	24	25
26	27	28	1	2	3	4
5	6	7	8	9	10	11

Features:

This application consists of many features like SUPPORT, EMAIL and Tasks.

1.Support:

Here User can interact with the admin and able to raise the tickets/issues .

Mark as Solved:

If the issue is fixed by the admin then you(user) can mark it as SOLVED.

2. Emails:

By using this we can communicate with the other staff and customers with in the organisation.

We can also use the Email Templates (Already created content)

3. Task:

Here we can assign the tasks to your organisation members.

4. Pusher Notifications:

We are Integrated the laravel notifications by using Pusher push notifications(https://pusher.com/docs/push_notifications).

Here we used JavaScript and PHP script for sending notifications.

We are used pusher when Cancel Subscription, Resume Subscription, Change and Extend Subscriptions by admin. You can find the Desktop notifications(Alert) in User account(Organization).

In our App you can find the Code for pusher from bellow files.

JavaScript `resources/views/layouts/pusherjs.blade.php`

PHP `app/Listeners/Subscription/CancelSubscriptionListener.php`

5. Laravel Backup

We used "laravel filesystem" to backup the files and Database. We can save the files into Local and Dropbox. Mention the file names in `config/backup.php` which you want Back Up. You can include and exclude the files here.

Run the below command for Back Up.

```
php artisan backup:run
```

For clean/clearing the Back Up run the below command

```
php artisan backup:clean
```

6.Paypal

PayPal is the faster, safer way to make an online payment, receive money.

- Paypal used for creating Subscriptions.
- We have integrated paypal by using laravel-paypal (<https://github.com/srmklive/laravel-paypal>).
- By using this paypal we can create recurring payment profile and manage recurring payments profile status.
- By using this feature customers can pay the invoices.

7.European Vat

It supports European VAT with Stripe and Paypal . Here we have used Laravel "[vat-calculator](#)" for calculating European Vat.

8.Multi Language

We have added multi language feature by using gTranslator. Refer this (<https://github.com/chaibialaa/gTranslator>). You can choose/change the language from settings of ADMIN section as well as USER section.You can choose different language for ADMIN and USER.

Note: If you choose any language in user section then same language will be applicable for CUSTOMER and STAFF also.

Paypal:

PayPal is the faster, safer way to make an online payment, receive money. By using this feature customers can pay the invoices.

We have integrated paypal by using laravel-paypal (<https://github.com/srmklive/laravel-paypal>). For this you need to follow the below steps

- First you need to have an pay pal account or else create an account here (<https://www.paypal.com>)
- **For Live credentials:** We should have API credentials for those we credentials we need to create Paypal developers account(<https://developer.paypal.com/docs/classic/api/apiCredentials/#create-an-api-signature>)

For Sandbox Credentials:

- To create sandbox paypal account (https://developer.paypal.com/docs/classic/lifecycle/sb_create-accounts/) please follow the steps which were provided in the link.
- After finishing the above step, you can see the accounts/emails which you have created (Business and buyers). Click on the Business account which displays **Profile & Notifications**.
- Click on the **Profile**,you can see a modal with different tabs.
- Choose the **API Credentials Tab**
- Here you can get the API Credentials. Use those credentials in the **LCRM Settings Page**

Note:

Don't get confuse between **PAYPAL_SANDBOX_API_SECRET** and **Signature**. Both are same.

Handling Paypal IPN:

You can also handle Instant Payment Notifications from PayPal. Suppose you have set IPN URL to <http://saas-demo.lcrmapp.com/ipn/notify/> in PayPal.

- To handle Paypal IPN refer laravel paypal documentation <https://github.com/srmklive/laravel-paypal#paypalipn>

Setting up IPN Notifications on paypal:

To setup the ipn notifications refer the paypal documentation

<https://developer.paypal.com/docs/classic/ipn/integration-guide/IPNSetup/>

Laravel Vat:

Handle all the hard stuff related to EU MOSS tax/vat regulations, the way it should be. Can be used with **Laravel 5 / Cashier**— or **standalone**.

For more detail understanding refer this <https://github.com/mpociot/vat-calculator>

Vat for User:

Vat is applied to the users when admin has European Vat **TRUE** in settings . Vat is applied based on the IP address(location).

Ex: Vat of the "User" is calculated based on the "Admin" location. If admin is in Netherlands then all the users should pay the tax of 21% while subscribing to the plan.

Note: If user has a VAT NUMBER then no need to pay the VAT. User should mention the valid VAT NUMBER in user settings.

Vat for Customer:

Vat is applied to the Customer when User has European Vat **TRUE** in settings . Vat is applied based on the IP address(location) .

Ex: Vat of the "Customer" is calculated based on the "User" location. If admin is in Netherlands then all the Customers should pay the tax of 21% while paying the invoices.

Note: If Customer has a VAT NUMBER then no need to pay the VAT. Customer should mention the valid VAT NUMBER in Customer settings(If Customers belong to same company then they will be having same VAT Number).

1. If customer has vat number, in invoice page he able to see the total amount (including vat) but while paying the invoice he can see the deducted amount(removal of vat amount)

Important note:

Lcrm Saas does not guarantee 100% compliance with EU VAT regulations. We gave it our best and will accept improvements if any.

Update 1.0.1:

Stripe Events:

- Added stripe events in subscription page.
- Added stripe events in Organisation page.

Bug Fixes:

- Fixed issue in payments page of admin section related to the plan (Disable the plan when it exceeds the number of users).

Update 1.0.2:

- Added Paypal functionality for payment and subscribing the plans. Lcrm Saas supports both **Stripe** and **Paypal** payment gateways.
- Added paypal gateway in customer account for paying invoices.
- Added the charts in leads, product, salesteams, quotations and sales order pages. Which represents the data in graphical format.

Bug Fixes:

- We have fixed the icons issue in localhost.

Added Files List:

Deleted Files List:

- `resources/assets/front/sass/aboutstyles.scss`
- `resources/assets/front/sass/blog_list_styles.scss`
- `resources/assets/front/sass/contact_page1_styles.scss`

Update 1.0.3:

- Added Import option in Products, Categories, Leads, Company and Customer pages.
- Added Laravel VAT (For European Countries) which supports with Stripe and Paypal (Subscriptions).

Note:

For better understanding of VAT Functionality refer this <https://lorvent.gitbooks.io/lcrm-saas/laravel-vat.html>

Added Files List:

- `app/Http/Requests/CompanyImportRequest.php`
- `app/Http/Requests/LeadImportRequest.php`
- `resources/assets/front/images/` (all images)
- `resources/assets/js/components/company-import.vue`

Update 1.0.4:

- We have added multi language feature by using gTranslator. Refer this (<https://github.com/chaibialaa/gTranslator>).
- Added EU VAT feature in customer section while paying the invoices.

Added Files List:

- resources/views/customers/setting/index.blade.php
- resources/lang/
